To contact another broadband phone user (not part of freespeech network)
There are three cases
1/ Providers we have a peering arrangement with
you can call directly using phone numbers (we are in the process of arranging this)
2/ If you have a soft phone.
You will need to use a SIP uri - this is similar to an email address.
Simply enter the SIP address of the broadband phone you are calling.
example
904@voiptalk.org - will connect you to an echo test with voiptalk.org
3/If you have a hardware phone.

Enter the SIP uri address in your online account 'phonebook', once the number have been entered you can use 'click to dial' - by clicking the number your phone will ring and you will be through connected to the other user.

Note: Incoming calls must be permitted by the other network
