**SIP Server/Proxy/Registrar:** freespeech.co.uk

*\*If you have a setting **Outbound Proxy** on your phone please make sure to leave it blank/OFF. **Outbound Proxy** is NOT the same as **SIP Proxy** and may cause audio problems if enabled.*

**SIP User ID:** phone number you were given on registration

**Authenticate ID:** phone number you were given on registration

**Authenticate Password:** password you provided on registration

**Name:** (string that will appear on some other phones)

**DNS SRV:** No

**DTMF:** RFC2833**Preferred Codec/Vocoder list:**

- » G729A (or G729A/B)
- » PCMA
- » ILBC

***Note:** Not all devices will support these codecs/vocoders.*

***Optionally** if you are using STUN \*\*see note below*

**NAT Traversal (STUN):** YES

**STUN server is:**stun.freespeech.co.uk

Once your phone is configured it should become *registered* with our network, your phone needs to be registered before you can make/receive any calls. Your *registration* status will be displayed on your phone, this indication varies from manufacturer to manufacturer (refer to your manual). See Device Help for further instructions.

*\*\*STUN is a method to help get over problems making and receiving calls through some routers - we recommend you initially try with STUN turned ON, if you have problems registering or making/receiving calls then test again with STUN turned OFF (by removing the settings).*
